

ZIMMER+ROHDE

Product data sheet

With its high hemp content, the FAME article introduces this sustainable material into a Zimmer + Rohde collection for the first time ever. Hemp, which is just as traditional as linen and has been known for centuries, is produced in a much more ecological way; the plant itself requires very little water and is hardly susceptible to pests.

FAME allures with its exceptionally soft, voluminous feel and is the epitome of natural luxury.
